

SECURITY SPARRING PARTNER

Your outside security expert *on call* — the gap between pentest and training.

Most security engagements are project-based. But between pentests, trainings, and workshops, your teams face a steady stream of architecture decisions, design questions, and trade-offs every single day. The retainer fills exactly that gap — you have someone on speed dial who knows your architectures and attack surfaces and thinks ideas through with you, *before* they ship.

THREE TIERS

Sparring **THE LOW-FRICTION ENTRY POINT**

A regular outside perspective on your security decisions.

- › Monthly review call on whatever's on your plate
- › Ad-hoc questions by email or chat — no call needed
- › Proactive monitoring of your tech stack
- › Priority scheduling & discounts on project work

Advisory **A STRUCTURED SECURITY CADENCE**

More involvement, more structure, deeper integration.

- › Everything in Sparring, plus:
- › Bi-weekly review calls
- › Findings triage — making sense of scanner output
- › AI coding & agentic workflow guidance
- › Quarterly architecture deep-dive
- › Optional: DNS & domain monitoring

Embedded **ALWAYS IN THE LOOP**

I become a fixed part of how your team thinks about security.

- › Everything in Advisory, plus:
- › Weekly review calls
- › Participation in design reviews of critical features
- › Ongoing threat-model upkeep (attack tree / Threatgile)
- › Structured security improvement roadmap
- › Optional: external attack-surface monitoring
- › Hands-on support during security incidents

SCOPE An advisory relationship — not a CISO role, no compliance sign-off, no dedicated pentesting or multi-day training. Those are available separately, at a discount for retainer clients.

WHY A RETAINER INSTEAD OF HOURLY?

With hourly billing, teams hesitate to “burn an hour” on a quick architecture or dependency question. A retainer flips that: the time is already reserved, so it gets used — *before* decisions are final. Clients engage 2–3× more often, and the focus shifts from firefighting to prevention.

PICK YOUR FOCUS AREAS

- **General security architecture**
Dependency choices, auth patterns, API design, infrastructure hardening — the everyday trade-offs.
- **Agentic AI security**
Threat modeling for new agents, reviews of existing deployments, MCP & tool-chain risks.
- **Secure development lifecycle**
CI/CD hardening, dependency management, secure coding — including reviews of AI-generated code.
- **Cloud & infrastructure security**
IaC reviews, cloud configuration assessments, and supply-chain hardening.

HOW IT WORKS

- 1 Scoping call covering team structure, tech stack, and focus areas.
- 2 Pick a tier — minimum term is typically 6 months.
- 3 Set up cadence & channels: calls, chat, email.
- 4 Teams actively use the retainer — architecture, reviews, triage.
- 5 Hours are use-it-or-lose-it — no rollover between months.

Which tier fits your team?

Every engagement starts with a free scoping call to tailor the tier, focus areas, and cadence to your stack and team structure.
